                                                                                                                                                                                       ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a fluorescent protein derived from green fluorescent protein (GPP) or its analogue. The GPP containing mutations are Fefia and E252G has a bigger compared to other GPP's making it very suitable for high throughput screening due to better resolution. The fluorescent protein is useful in invitro assays for measuring protein redistribution. The fluorescent protein is useful in studying cellular cfunctions in living cells, as protein tags in transgenic animals, living and fixed cells, organelle tags, secretion marker and genetic reporter. The fluorescent protein is also useful as a cell or organelle integrity marker, a marker for changes in cell morphology, as transfection marker, and as a marker to be used in combination with fluorescence activated cell incorting (RACS). The novel proteins can also be used as reporters to monitor live or dead biomass of organisms, such as fungi. The fluorescent corpuction is also useful as markers in transcriptional and translational corpusing for performing transposon vector mutagenesis and as a reporter corpused. For bacterial detection. Transposons encoding the fluorescent protein are useful for screening promoters and for tagging plasmids and chromosomes. The fluorescent protein engine performing an engine promoter of the proposition of a phage is useful for screening promoters and for tagging plasmids and chromosomes. The fluorescent protein engineered into the genome of a phage is useful for the parameters of the fluorescent protein engineered into the genome of a phage is useful for the parameters of the fluorescent protein engineered into the genome of a phage of a phage of a phage of a phage of a phage of a phage of a phage of a phage of a phage of a phage of a phage of a phage of a phage of a phage of a phage of a phage of a phage of a phage of a phage of a phage of a phage of a phage of a phage of a phage of a phage of a phage of a phage of a phage of a phage of a phage of a phage of a phage of a phage of a phage of a phage of a phage of a phage
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  61 LVTTLSYGVQCFSRYPDHMKQHDFFKSAMPEGYVQERTIFFKDDGNYKTRAEVKFEGDTL 120

```
The invention relates to systems, methods and reagents for cell-based screening or detection of compounds which affect particular biological functions. The methods of the invention utilise fluorescent biological functions. The methods of the invention utilise fluorescent biological calcular distribution of at least the fluorescent alteration in the cellular distribution of at least the fluorescent cancer. C. dispay fused to a fluorescent protein (e.g., jellyfish green fluorescent protein (e.g., jellyfish green fluorescent correction (GFP), or derivatives thereof). Such biosensors are located in the cytoplasm, but on stress activation translocate to the mucleus. In the cytoplasm, but on stress activation proteins can be used to detect protease another embodiment biodetector proteins can be used to detect protease cativity. Such protease biodetector fusion proteins comprise one or more fluorescent proteins; a recognition signal which is cleaved by the protease, and at least one cellular localisation signal. The latter two components may be from heterologous sources. Due to the components may be from heterologous sources. Due to the components may be from heterologues sources. Due to the components of a single protein which is acted upon by the protease of interest, the region of the cell. Once acted on by the protease of interest, the constant protein signal attached to the fluorescent protein enables the fluorescent protein to be directed to a different cellular compartment after cleavage of the protease recognition sequence. The change in distribution of the fluorescent protein can be detected using imaging methods with a high degree of spatial resolution. The methods and imaging methods with a high degree of spatial resolution.
Biodetector protein; fusion protein; recognition site; cellular targetting sequence; cellular localisation; fluorescent protein; protease activity detection; toxin detection; cellular stress detection; drug discovery; cell based screening.

```
biosensors of the invention can be used to investigate a wide range of cellular activities and to screen compounds which modulate these extrivities. Biosensors containing a recognition site for caspase, for example, may be used for the screening of compounds which modulate apoptosis, while biosensors containing other protease recognition sites may be used for the detection of proteolytic toxins (such as anthrax lethal factor). The method provides improved target validation and candidate compound optimisation by combining many cell screening formats with fluorescence-based molecular reagents and computer-based feature and speed of data collection and faster evaluation of drug candidates. Sequences AAB22881-B222885 represent fluorescent proteins which may used as components of biosensor fusion proteins of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   61 LVTTLSYGVQCFSRYPDHMKQHDFFKSAMPEGYVQERTIFFKDDGNYKTRAEVKFEGDTL 120

protein based on the Aequorea green fluorescent protein (GFP). The emission intensity changes as pH varies between 5 and 10 of the present protein are novel. The functional engineered fluorescent proteins show reversible changes in fluorescence over physiological pH ranges. They can be used for determining the pH of samples and cells. The polynucleotides can also be used to produce transgenic animals. The fluorescent protein pH sensors can be delivered to cells in the form of polynucleotides encoding the protein sensor fused to a targeting signal. The targeting signal incots the expression of the protein sensors to restricted cell locations. This makes it possible to measure the pH of a precisely defined cellular region or organelle
                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

The present sequence is a fluorescnet protein used in the construction of a fluorescent protein indicator. The indicator comprises a sensor polypeptide that is responsive to a chemical, biological, electrical or physiological parameter, and a fluorescence protein functional group. The sensor polypeptide is operatively inserted into the fluorescent moiety. The fluorescent indicator is useful for detecting the presence of a response inducing member in a sample. The method involves contacting the sample which a change is indicator and detecting a change in fluorescence, in which a change is indicative of the effect of the parameter on the sensor polypeptide. The novel fluorescent proteins are advantageous due to their transfer)-based sensors
                                                                                                                                                                                                                                                                                                                    Novel fluorescent proteins comprising a sensor protein inserted into them, useful for measuring the response of a sensor biological, chemical, electrical or physiological parameter in vivo or in vitro.

                                                                                                                                                                                                                                                                 The present sequence is that of the EGFP signal domain, which can be included in novel recombinant protease biosensors (FBS) of the invention. The PBS (see AAY79628-4) comprise: a first domain (see AAY79529-7).

Comprising at least 1 detectable polypeptide signal such as the present sequence; a second domain (see AAY79588-622) comprising at least 1 cactant target sequence. A recombinant nucleic comprising at least 1 reactant target sequence. A recombinant nucleic acid (see AAA7677-43) encoding the PB, an expression vector, and a compound see AAA7677-43) encoding the PB, an expression vector, and a contacting a host cell are also claimed. A claimed method for identifying compounds that modify protease activity in a cell involves contacting a host cell that possesses the recombinant PB with a test compound, and determining the PB distribution in the host cell, where changes in the distribution of the PB are correlated with modification of protease activity by the test compound. Claimed kits for identifying compounds that modify protease activity in a host cell include the recombinant nucleic activity, and to identify specific activity based activation of enzymatic activity, and to identify specific activity based
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       61 LVTTLTYGVQCFSRYPDHMKQHDFFKSAMPEGYVQERTIFFKDDGNYKTRAEVKFEGDTL 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             VNRIELKGIDFKEDGNILGHKLEYNYNSHNVYIMADKQKNGIKVNFKIRHNIEDGSVQLA 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                             The invention provides melanin concentrating hormone (MCH) receptor (MCHR) chimeric and fusion proteins. The MCHR chimeric proteins comprise MCHR polypeptide regions from different species. The MCHR fusion protein comprise MCHR polypeptide region and a fluorescent polypeptide region protein joined directly, or via a linker, to the carboxy side of the MCHR pelypeptide region. The MCHR fusion proteins can be expressed by standard recombinant methodology. MCH action promotes feeding (orexigenic) and up regulation of MCH activity stimulates food intake. The present sequence represents a A. victoria green fluorescent protein (GFP) and a linker

```
The specification describes a method for assessing the growth rate and death rate of a micro-organism within a predetermined time period in a desired environment. The method comprises introducing at least two reporter genes encoding luminescent and/or fluorescent products into the micro-organisms, incubating the micro-organism within the desired environment, and detecting luminescence and/or fluorescence after a predetermined time period. Use of two different markers within a micro-organism enables the differentiation between growth and death rates. The method is used to assess the growth rate and death rate of a micro-organism within a predetermined time period in a desired environment. The present sequence represents a green fluorescent protein (GFP), and is encoded by a plasmid which encodes luminescent and fluorescent proteins, and is used in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         61 LVTTLTYGVQCFSRYPDHMKQHDFFKSAMPEGYVQERTIFFKDDGNYKTRAEVKFEGDTL 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ద
                                                                                                                         fluorescence characteristic and having a function of showing stable fluorescence characteristic and having a function of showing stable fluorescence characteristic in acid region. A method for the preparation of a cyan-green fluorescent protein is provided which involves a transformant transformed by a recombinant vector comprising the gene, where the transformant is cultured and the protein is collected from the culture. The present sequence represents the A. victoria green fluorescent protein (EGFP)

The invention describes methods of automated detection, classification
and identification comprising treating cells containing luminescent
creporter molecules (I) in array of locations with a test substance, where
cc reporter molecules (I) in array of locations with a test substance,
clocation to obtain luminescent signals and converting optical information
cc into digital data to interpret presence of toxins in the test substance.
The method are useful for detection of toxins chosen from proteases, ADP-
cribosylating toxins, cytotoxic phospholipases, and exfoliative toxins.
Cr Three classes of cell-based luminescent reporter molecules such as
detectors, classifiers and identifiers are described and serve as
creporters of toxic threat agents. The first two levels of
characterisation ensure a rapid readout of toxin class without
cs characterisation ensure a rapid readout of toxin class without
cs several complex mixtures of known toxins. This is the amino acid sequence
cs arcrificing the ability to detect many new mutant toxins or dissect
cs arcrificing the ability to detect many new mutant toxins or dissect
cs arcrificing the ability to detect many new mutant toxins or dissect
cs arcrificing the ability and a known toxins. This is the amino acid sequence
cs of a protease biosensor related signal sequence used in the cell-based
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               VNRIELKGIDFKEDGNILGHKLEYNYNSHNVYIMADKOKNGIKVNFKIRHNIEDGSVQLA 180

The invention relates to a method for mutagenesis that comprises synthesising a mutated strand and a complementary strand by use of synthesising a mutated basically comprises a DNA synthesis in which one cor more primers that have a nucleotide sequence containing at least one or more primers that have a nucleotide sequence containing at least one mutation and a phosphorylated 5-terminus are annealed to a template DNA and then subjected to an elongation reaction using a thermostable high-fidelity DNA polymerase, after which the phosphorylated 5-terminus and then subjected terminus are ligated by means of a thermostable bNA ligase to synthesise a circular DNA containing the primers, a digestion in which the step of DNA synthesis is repeated several fines to amplify the DNA containing the primers and then, at least DNAs other than the amplified circular DNA are digested into several fragments; and a double-stranded CC of digestion as megaprimers, the megaprimers are annealed to the circular DNA synthesis of which, with the several fragments obtained in the step of DNA synthesis and which, with the several fragments obtained by the circular DNA synthesis and adoptined by an elongation reaction performed using the thermostable high-fidality DNA polymerase. The method is useful for mutagenesis, particularly for introducing cantenin mutations at certain sites of the nucleotide sequence. The present method is simple, speedy, economical and widely applicable. The present sequence is Agueured victoria enhanced green fluorescent protein (GFP) used for mutagenesis in an exemplification of the invention. The EGFP is derived the strain gives in the green fluorescent protein (GFP) sequence of Agueurea
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            LVTTLSYGVQCFSRYPDHMKQHDFFKSAMPEGYVQERTIFFKDDGNYKTRAEVKFEGDTL 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   61 LVTTLTYGVQCFSRYPDHMKQHDFFKSAMPEGYVQERTIFFKDDGNYKTRAEVKFEGDTL 120

The present invention relates to chimeric phosphorylation indicators comprising a phosphorylation polypeptide and a fluorescent protein or in operative linkage, a donor molecule, a phosphorylatable domain. a phosphoaminoacid binding domain. (PAABD) and an acceptor molecule. The phosphoaminoacid binding domain. (PAABD) and an acceptor molecule. Kinases or phosphatases in a biological sample. They are also useful in high throughput analysis e.g. for detecting a kinase inhibitor or phosphatase inhibitor. The present sequence is Aequorea victoria enhanced green fluorescent protein (EGFP) used in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 180

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      181 DHYQQNTPIGDGPVLLPDNHYLSTQSALSKDPNEKRDHMVLGGFVTAAGITLGMDELYK 239
Sequence 1, Application US/09364946

Patent No. 630600

GENERAL INFORMATION:
APPLICANT: Kain, Steve

APPLICANT: Li, Xianqiang

TITLE OF INVENTION: GUG

TITLE OF INVENTION: Bapidly Degrading GFP-Fusion Proteins and Methods

TITLE OF INVENTION: US/09/364,946

CURRENT APPLICATION NUMBER: US/09/364,946

CURRENT PILING DATE: 1999-07-30

CURRENT PILING DATE: 1999-11-13

NUMBER OF SEQ ID NOS: 14

LENGTH: 281
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      181 DHYQQNTPIGDGPVLLPDNHYLSTQSALSKDPNEKRDHMVLLEFVTAAGITLGMDELYK 239

Sequence 2, Application US/09513783A

Patent No. 6416959

GENERAL INFORMATION:
APPLICANT: Giuliano, Kenneth A.
TITLE OF INVENTION: A System for Cell Based Screening
FILE REFERENCE: 97-022-L1

CURRENT APPLICATION NUMBER: US/09/513,783A

CURRENT FILING DATE: 2000-02-25

NUMBER OF SEQ ID NOS: 180

SOFTWARE: PatentIn Ver. 2.0

LENGTH: 294
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ; OTHER INFORMATION: Description of Artificial Sequence:; OTHER INFORMATION: GFP-DEVD-Annexin II construct US-09-513-783A-2

Sequence 127, Application US/09417197

Patent No. 6518071

GENERAL INFORMATION:

APPLICANT: Ole THASTRUP, et al.

TITLE OF INVENTION: A Method For Extracting Quantitative Information Relating To An Intring OF INVENTION: A Method For Extracting Quantitative Information Relating To An Intring OF INVENTION: On A Cellular Response

CURRENT FILING DATE: 1999-10-07

CURRENT APPLICATION NUMBER: US/09/417,197

CURRENT PALLORS: 143

SOFTWARE: PatentIn version 3.0

Sequence 4, Application US/09999745

Patent No. US20020157120A1

GENERAL INFORMATION:
APPLICANT: THE REGENTS OF THE UNIVERSITY OF CALIFORNIA
APPLICANT: Baird, Geoffrey
TILE OF INVENTION: CIRCULARLY PERMUTED FLUORESCENT PROTEIN INDICATORS
FILE REFERENCE: REGEN1470-1
CURRENT APPLICATION NUMBER: US/09/999,745
CURRENT PILING DATE: 2001-10-23
PRIOR FILING DATE: 1999-05-21
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             APPLICANT: REGENTS OF THE UNIVERSITY OF CALIFORNIA

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

DNA-directed DNA polymerase (EC 2.7.7.7) II catalytic chain - yeast (Saccharomyces cerev)
NyAlternate names: DNA-directed DNA polymerase II chain A; protein N0825; protein XNL262v
C;Species: Saccharomyces cerevisiae
C;Date: 10-Sep-1999 #sequence revision 10-Sep-1999 #text_change 21-Jul-2000
C;Accession: A36028; B36028; S60919; S61235; S65121
R;Morrison, A.; Araki, H.; Clark, A.B.; Hamatake, R.K.; Sugino, A.
A;Title: A third essential DNA polymerase in Saccharomyces cerevisiae.
A;Reference number: A36028; MUID:90381771; PMID:2169349
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    A; Molecule type: DNA

Structural and spectral response of green fluorescent protein
variants to changes in pH.";

L Blochemistry 38:226-5301(1999).

-!- FUNCTION: Bnergy-transfer acceptor. Its role is to transduce the blue chemiluminescence of the protein aequorin into green fluorescent light by energy transfer; Fluoresces in vivo upon receiving energy from the Ca(2+)-activated photoprotein aequorin. Absorbs light maximally at 395 nm and exhibits a smaller absorbance peak at 470 nm. The fluorescence emission spectrum peaks at 500 nm with a shoulder at 540 nm.

-!- SUBUNIT: Monomer.

-!- TISSUE SPECIFICITY: Photocytes.

Plant Mol. Biol. Rep. 13:327-332(1995).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 -I- FUNCTION: The 43 kDa protein (p6) is a component of the core of photosystem II. It is a chlorophyll binding protein.
-!- SUBCELLULAR LOCATION: Integral membrane protein. Cyanelle thylakcid membrane.
-!- SIMILARITY: Belongs to the psbB / psbC family.
                                                                                                                                                                                   01-FEB-1996 (Rel. 33, Last sequence update)
16-OCT-2001 (Rel. 40, Last annotation update)
Photosystem II 44 kDa reaction center protein (P6 protein) (CP43).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Photosynthesis; Photosystem II; Thylakoid; Chlorophyll; Cyanelle;

Photosystem II 44 kDa reaction center protein (P6 protein) (CP43)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Turmel M., Mercier J.P., Cote M.J.J.;

"Group I introns interrupt the chloroplast psaB and psbC and the mitochondrial rrnL gene in Chlawdomonas.";

Nucleic Acids Res. 21:524-2550(1993).

--- FUNCTION: The 43 kba protein (p6) is a component of the core photosystem II. It is a chlorophyll binding protein.

--- SUBCELLULAR LOCATION: Integral membrane protein. Chloroplast
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Eukaryota, Viridiplantae, Chlorophyta, Chlorophyceae, Volvocales;

Aminoacyl-tRNA synthetase; Protein biosynthesis; Ligase; ATP-binding;
                                                                                                                                                J. Bacteriol. 185:2330-2337(2003).
-!- CATALYTIC ACTIVITY: ATP + L-leucine + tRNA(Leu) = AMP +
diphosphate + L-leucyl-tRNA(Leu).
-! SUBCELJULAR LOCATION: Cytoplasmic.
-!- SUBCELJULAR Belongs to class-I aminoacyl-tRNA synthetase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    10-OCT-2003 (Rel. 42, Created)

SUBCELLULAR LOCATION: Nuclear.

SUBCELLULAR LOCATION: Nuclear.

N-TERMINAL HALF OF THE PROTEIN, WHILE THE C-TERMINUS IS NECESSARY FOR COMPLEXING SUBUNITS B AND C.

MISCELLANEOUS: In eukaryotes there are five DNA POlymerases:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     14; Mismatches 49; Indels 31; Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   "DNA polymerase II, the probable homolog of mammalian DNA polymerase epsilon, replicates chromosomal DNA in the yeast Saccharomyces cerevisiae.";
                                        MEDLINE=96310631; PubMed=8740425; Sen-Gupta M., Lyck R., Fleig U., Niedenthal R.K., Hegemann J.H.; Sen-Gupta M., Lyck R., Fleig U., Niedenthal R.K., Hegemann J.H.; The sequence of a 24,152 bp segment from the left arm of chromosome with from Saccharomyces cerevisiae between the BNI1 and the POL2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                alpha, beta, gamma, delta, and epsilon which are responsible for different reactions of DNA synthesis.
-!- SIMILARITY: Belongs to the DNA polymerase type-B family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         R Germonilne; Lawley.
